WORK EXPERIENCE

Reliance Retail (Jio)   **SDE 1**   **Nov 2022-present**

- Played an integral role in the **Onboarding** project for a **B2B retailer**, effectively streamlining the onboarding process and reducing the time required for new retailers to onboard on the platform
- Worked on the **JioMart digital** project, an e-commerce website where retailers could place orders, after onboarded to our platform. Leveraged **VueJS and Javascript** to develop intuitive user interfaces for seamless order placement.
- Developed and took full **ownership** of **Admin Panel** for **Distribution Management System (Jio Platform)**, streamlining user and tenant creation. Implemented bulk upload functionality to reduce manual work for distributors
- Contributed to the development of the **Udhari (credit system)**, utilizing **ReactJs, CSS and Redux toolkit** to create a comprehensive and user-friendly interface for efficient management of financial transactions and user data
- Implemented TDS/TCS feature in JioMart platform for retailers to upload or show the claims and also created Admin panel to facilitate the approval process for claims requested by retailers, improving user satisfaction

Think N Learn (Byjus)   **Software Engineer**   **Aug 2021-Nov 2022**

- Responsible for designing, developing and delivering the requirements for byju's across the enterprise like **byju's web(for students), tutor plus (for Tutor)** and **CMS**
- Published React components for the common component lib like **Chat lib** and **Neo component lib** which help in reducing the development time of other teams
- Delivered full ownership in building an **in-house analytics system(OLAP & Clevertap),** cutting off manual efforts of PMs **by 100%**
- Collaborated with a team of front-end engineers to fix a major **production issue** in record time

Think N Learn (Byjus)   **Software Engineer Intern**   **Mar 2021 - Aug 2021**

- Produced stunning visual elements of web applications by translating UI/UX design wireframes into code while producing **high quality, reusable** markup using **ReactJS & Javascript, HTML5, CSS**
- Spearheaded the documentation of the project setup, which fully removed the external dependencies on the team
- Added **PurgeCSS** to the project which reduces the sizes of CSS files
- Assisted in troubleshooting and resolving software defects, improving the overall stability of the application

PROJECTS

- **Udemy Clone** - This is built with React and Redux, mirrors Udemy's core features. Users can browse courses, access course details. add to cart, and explore categories. Links : Github, Demo.
- **Shopping Cart** - A shopping cart with "Add to Cart" , advanced product filtering sorting, delivery options, and an integrated rating system. Links : Github, Demo.
